

Individual reflection – Harry

I have mainly worked with requirement 2 together with Elsa, but I have also contributed with requirement 4.

This is my first group programming project where the parts have been so tightly intertwined. It has been challenging and I have learned a lot, both when it comes to collaboration and testing.

As I worked with the project, I constantly gained new insights, which led to us changing the program in different places. I noticed that continuous testing helped us identify various bugs that occurred as a result of the changes.

I experienced it was a challenge to work in the same class with another person at the same time. I would have done it a different way next time.

We had many good discussions where everyone had the opportunity to provide input. It was useful to be able to discuss issues and see other people's solutions. It helped me gaining a broader understanding. We did not always agree, but fortunately we had a democratic process to decide. Some of the discussions became too long and unproductive. I think we would have benefited from managing the discussions better. One possible solution would have been to have a set maximum time per case.

I could have been better at communicating and coordinating the team along the way. I now see in retrospect that these were issues I could address earlier.
